

The new generation of bale wrap

PolybalePro is a brand new silage stretch film that incorporates innovative Pro technology.

PolybalePro offers more film per reel with no compromise on performance:

- fewer reel changes = increased output

PolybalePro provides enhanced protection for wrapped bales by combining the film's natural strength with recently developed pre-orientated technology:

- increased oxygen barrier

Bales wrapped with **PolybalePro** use less stretch film:

- reduced plastic consumption

Protective sleeve packaging

The unwind indicator facilitates correct positioning on the wrapper

Easy to open and recycle: limited waste

® polybale *PRO*

This newly developed product unites 5 layer technology with the latest pre-orientated film innovation.

PolybalePro can be applied with a standard 70% pre-stretch.

PolybalePro has been developed for use on round bale combi-wrappers with no modifications to gears or settings required.

PolybalePro 20µm can be used for round bales and square bales no bigger than 80cm x 70-90cm and also for continuous wrapping.

For optimum results we recommend 6 layers of film are applied.

PolybalePro offers significant benefits: more bales per reel, greater time efficiencies and reduced environmental impact.

Reduced Costs

More Bales

Less Waste

Technical Specification

	Pro
Width (mm)	750
Thickness (µm)	20
Length (m)	2000
Colour	Green
Pallet Dimensions (cm)	125 x 100
Reels/Pallet	40
Pallet Height (cm)	± 165
